Stent Used: Over and Under PCS 3.5 x 28

Case Description:

- Patient presented with an AMI and the graft was totally occluded, PTCA performed and due to large thrombus thrombolytic therapy administered, patient scheduled the next day finding the 13 year-old degenerated SVG to LAD presenting an aneurysm containing remaining thrombus.
- Proximal PCS (3.5 X 28) deployed in the graft to exclude the aneurysm and thrombus and treat the lesion and a regular stent placed in the distal LAD.
- Patient follow up at 8 months show patent stent with no angiographic changes., patient remained asymptomatic.

Pre Intervention

Post Intervention

Follow up at 8 months
